f) receiving an image of said second series of images from said remote source;

g) selecting a portion of said image of said second series based at least in part on said selection instructions;

h) providing said portion of said image of said second series to a second display viewable by said user and configured to display said portion of said image of said second series; and

i) repeating steps f)-h) so that said portions displayed by said second display appear as a second continuous video and so that subsequent portions displayed by said second display correspond to selected portions of subsequent images of said second series,

wherein said first and second displays are configured so that said first and second continuous videos appear as a three-dimensional continuous video.
